EXPERIENCE

Fidelity International — Software Developer Intern

Jan – Jul 2025 · Gurugram

- Resolved **50+ UI/UX and functional bugs** in Fidelity's GDS React Components Library, directly improving adoption across **70+ internal engineering teams**.
- Achieved **100% test coverage** across critical components using Playwright + Jest, eliminating untested regressions and accelerating deployment confidence.
- Authored Storybook documentation for the shared component library, cutting engineer onboarding and integration time across the org.

Elucidata — Fullstack Intern

Jan 2026 – Present · Bengaluru

- Built and maintained **5+ production web apps** (React + Python) for scientific data platforms used by biotech researchers.
- Optimised AI-driven API workflows, reducing operational costs by **40–50%** through token batching and request deduplication.
- Diagnosed and resolved critical memory and performance issues across frontend and backend services, stabilising production under high data load.

AssignmentPal — Founder & Tech Lead

Mar 2023 – Jan 2025 · Delhi

- Built internal tooling and automated delivery pipelines using Python and AI APIs, improving team output speed by **50%** and scaling to **100+ global clients**.
- Designed and maintained the platform's core workflows — task routing, QA checks, and client delivery automation — while leading a team of 5+ across operations.

PROJECTS

BobbyFlow

[Live Demo](#)

[GitHub](#)

Aug 2025

React · TypeScript · Appwrite · Google Calendar API · OAuth 2.0

- Engineered bi-directional Google Calendar sync with auto focus-session logging — solved OAuth 2.0 token refresh edge cases to ensure zero-interruption background sync.
- Built productivity analytics dashboard (charts, habit tracking, Pomodoro bindings) with real-time state management using React hooks and Appwrite backend.

LLM-Powered Cohort Builder

[GitHub](#)

Dec 2025

React · Python · Flask · SQLite · Gemini API

- Designed an LLM pipeline (Gemini) that converts ambiguous natural-language queries into safe, parameterised SQL — non-technical users can self-serve cohort insights with no SQL knowledge.
- Built a debug drawer exposing SQL, params, and LLM mode per query; added deterministic fallback execution and 20-row pagination for safety over sensitive patient data.

Desi Hatti — Property Rental Platform

[Live Demo](#)

[GitHub](#)

Mar 2025

Spring Boot · React.js · MongoDB · JWT · REST APIs

- Architected role-based access control (Customer · Landlord · Admin) with JWT authentication and Spring Boot REST APIs — designed the full auth flow and session management from scratch.

TECHNICAL SKILLS

Languages Python · JavaScript · TypeScript · Java · C++ · HTML/CSS

Frontend React.js · Next.js · Tailwind CSS · Styled Components

Backend Flask · FastAPI · Spring Boot · Node.js

Databases PostgreSQL · MongoDB · SQLite

Testing Playwright · Jest · Storybook · Selenium

Tools Git/GitHub · REST APIs · JWT · Firebase · Appwrite · Gemini AI · Google APIs

EDUCATION

Guru Nanak Dev University, Amritsar

Aug 2021 – Jul 2025

B.Tech — Computer Science and Engineering **CGPA: 7.83**
